Financialexpress - June 26, 2019

Microsoft adds smart Phonetic Indic keyboards in 10 Indian languages for Windows 10.

Transliteration, unlike translation, automatically converts text from one script to another.

Continuing its endeavour to make technology accessible and productivity for all, [Microsoft](#) has introduced smart Phonetic keyboards for 10 Indian languages in its May 2019 update for Windows 10.

The updated virtual keyboard learns from the behaviour patterns and preferences of the user and accordingly offers individualised word suggestions in Indian languages, enhancing and improving accuracy of text input. Since these keyboards are based on natural pronunciation, users don't need to separately learn to use them and simply start using them immediately.
